

Aqua Miser **AQUA CAB-II**

Comprehensive
Control Panel with
Operator Interface

Customizable

Totally enclosed for safe and quiet operation

Designed with the high production user in mind – Speed and Performance

The Aqua Miser **AQUA CAB** family of Water Blast and Containment Cabinets are an integral part of automated waterjetting systems designed for the de-painting and cleaning of cylindrical items using high pressure water blasting. Designed to work with an Aqua Miser water blaster, the Aqua Cab easily removes coatings and rust and can deburr and clean items to a like new finish. It is fully adjustable to handle a variety of product profiles, diameters and lengths.

The **AQUA CAB II** model **RBB-40K** (shown) is equipped with horizontally mounted blast head and product rollers. It is capable of handling items with outside diameters from 11” to 42” max, and lengths from 6” to 11’-6” max. The cabinet is 15’ long x 10’ wide x 7’ high. Other cabinet sizes are available. The system operator interface touch buttons and on-screen dialog boxes allows the user full control of system processes including blast pressures and speeds.

Environmentally sound cleaning and stripping technology

The **AQUA CAB II** may be installed in conjunction with Aqua Miser’s available integrated customizable Water Filtration System that filters the blast waste and recycles the blast water for reuse as part of a closed loop waterjetting system. Both solids and contaminants are filtered and stored for easy removal. All waste is minimized and disposal fees are drastically reduced.
